

# CLEANER ENGINE

is more economical and environmentally friendly.

Internal combustion engines always accumulate deposits during use. Most A-Katsastus inspection stations offer a powerful BG Deposit Removal Service for both gasoline and diesel engines.

BG Deposit Removal restores combustion and engine operation to an optimal level. It lowers tailpipe emissions and fuel consumption. In addition, wear on the engine and its components is slowed down.

Deposit removal treatment improves the overall drivability of your car. It reduces problems caused by deposit buildup, such as engine malfunctions, jerking, misfires and general loss of power.

Deposit Removal is carried out by adding a professional grade BG product to vehicle's fuel tank at an inspection Station.

A-Katsastus recommends BG Deposit Removal Service to be carried out once a year or every 30,000 km.

Ask your inspector for more information!
